

Secure everything you build and run in the cloud.

“To answer the PCI auditor’s questions, I just opened Wiz and showed him all of the notifications and reports. He was amazed that Wiz scans for vulnerabilities every day, not just once every three months.”

WIZ

Wiz for Financial Services

Financial institutions have a large amount of sensitive data they need to protect in the cloud in order to gain their customers’ trust. It can be challenging to understand where your sensitive data is, how it can be accessed, and how different risks come together to result in a risk of a data breach.

Wiz’s comprehensive risk assessment makes it easy for financial institutions to stay secure in the cloud, helping them protect sensitive data and meet PCI compliance at scale.

A unified approach to cloud security

1. Security Posture Management (CSPM)
2. Workload Protection (CWPP)
3. Vulnerability Management
4. Infrastructure Entitlement Management (CIEM)
5. Container and Kubernetes Security
6. CI/CD security (IaC, VM/container image, registry scanning)
7. Data Security Posture Management (DSPM)
8. Cloud Detection and Response (CDR)

100% visibility in minutes

Wiz connects within minutes with zero impact on resource or workload performance. It builds an inventory of every technology running in your cloud and delivers complete visibility into every layer of your cloud stack with the industry’s first agentless, graph-based platform

Ensure compliance

Assess your environment against Wiz's built-in compliance frameworks for the financial services industry, including PCI-DSS, SOC 2, and GDPR, and generate compliance reports at the click of a button for your auditors.

Protect your customers’ data

Wiz’s Data Security Posture Management capabilities identify where your sensitive data in the cloud is, such as PII and PCI, and detect data exposures to allow you to proactively eliminate attack paths to discovered critical data. If you have strict data residency requirements, you can deploy Wiz on your own cloud infrastructure, so data never leaves your environment.

Deliver secure financial services using context

Wiz continuously prioritizes critical risks based on a deep cloud analysis of misconfigurations, network exposure, secrets, vulnerabilities, malware, sensitive data, and identities to provide you with a unified view of risk and the context around it, so you can prioritize remediation.

Wiz is the fastest growing cybersecurity company in the world. We're on a mission to help every organization build in the cloud securely.

Purpose-built for the unique complexities and workflows of cloud and hybrid environments, Wiz brings together sec, dev, and ops teams into one cloud security program.

"Wiz gives me a complete, detailed map to understand what needs to be done to achieve compliance. It's my checklist."

Omri Nachum,
CISO

BRIDGEWATER

"Team members who used to collate security reports manually are now freed from the task to focus on more impactful and valuable work"

Igor Tsyganskiy,
President & CTO

Morgan Stanley

"Multi-cloud enablement is at the heart of our transformation strategy and security is paramount. Wiz helps us visualize our entire cloud environment and drive actionable insights, in minutes. They've made cloud security an enabler for Morgan Stanley and helped us break down the barriers between security and development teams."

Katherine Wetmur,
Co-CTO

"We appreciated that Wiz's product was able to consolidate five key capabilities that we felt were important to securing our cloud environment using a single platform."

Adam Fletcher,
Chief Security Officer
